Overviews and Tutorials

ArcGIS Collector

Below are step-by-step instructions for downloading, signing-in, and launching the ArcGIS Online app.

1. If needed, download Collector App by searching ESRI Collector in the App Store.

System Requirements:

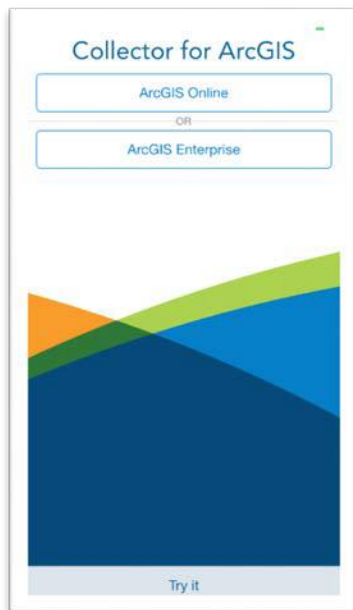

Android

- Android 4.2 (Jelly Bean) or later
- Processor: ARMv7 or later, or x86
- OpenGL ES 2.0 support
- Precise location (GPS and network-based) support

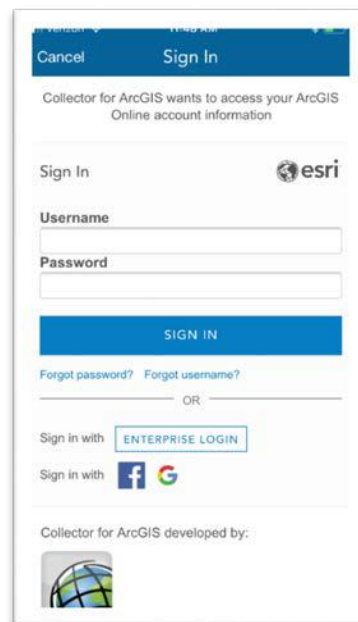

iOS

- iOS 8 or later
- iPhone, iPad, iPod touch

2. Start Collector App and sign in to ArcGIS Online.

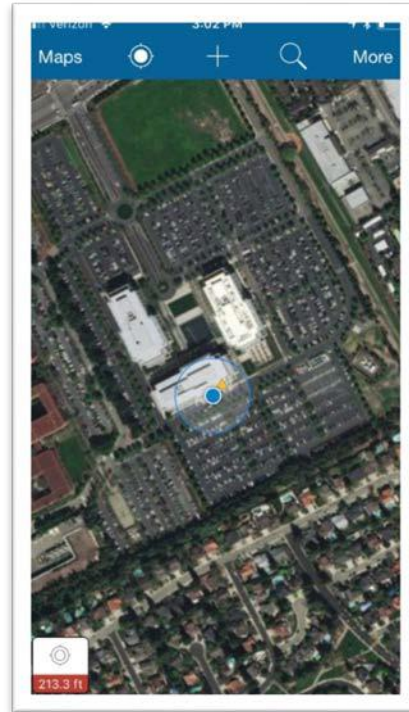

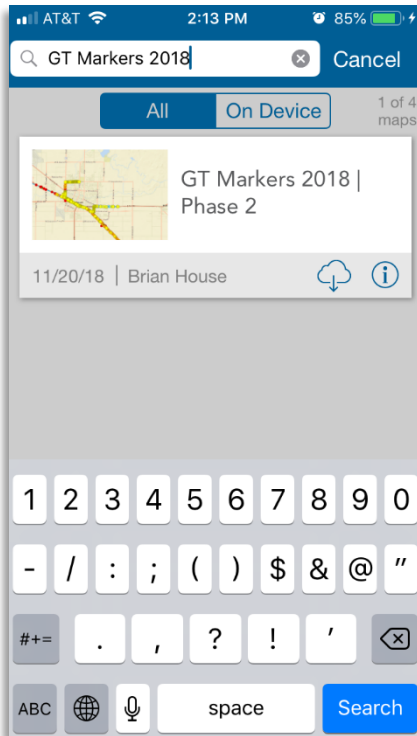

Select ArcGIS Online

Sign-in

1. Search and open GT Markers 2018 | Phase 2
2. The map will open and center on your location.

GPS On

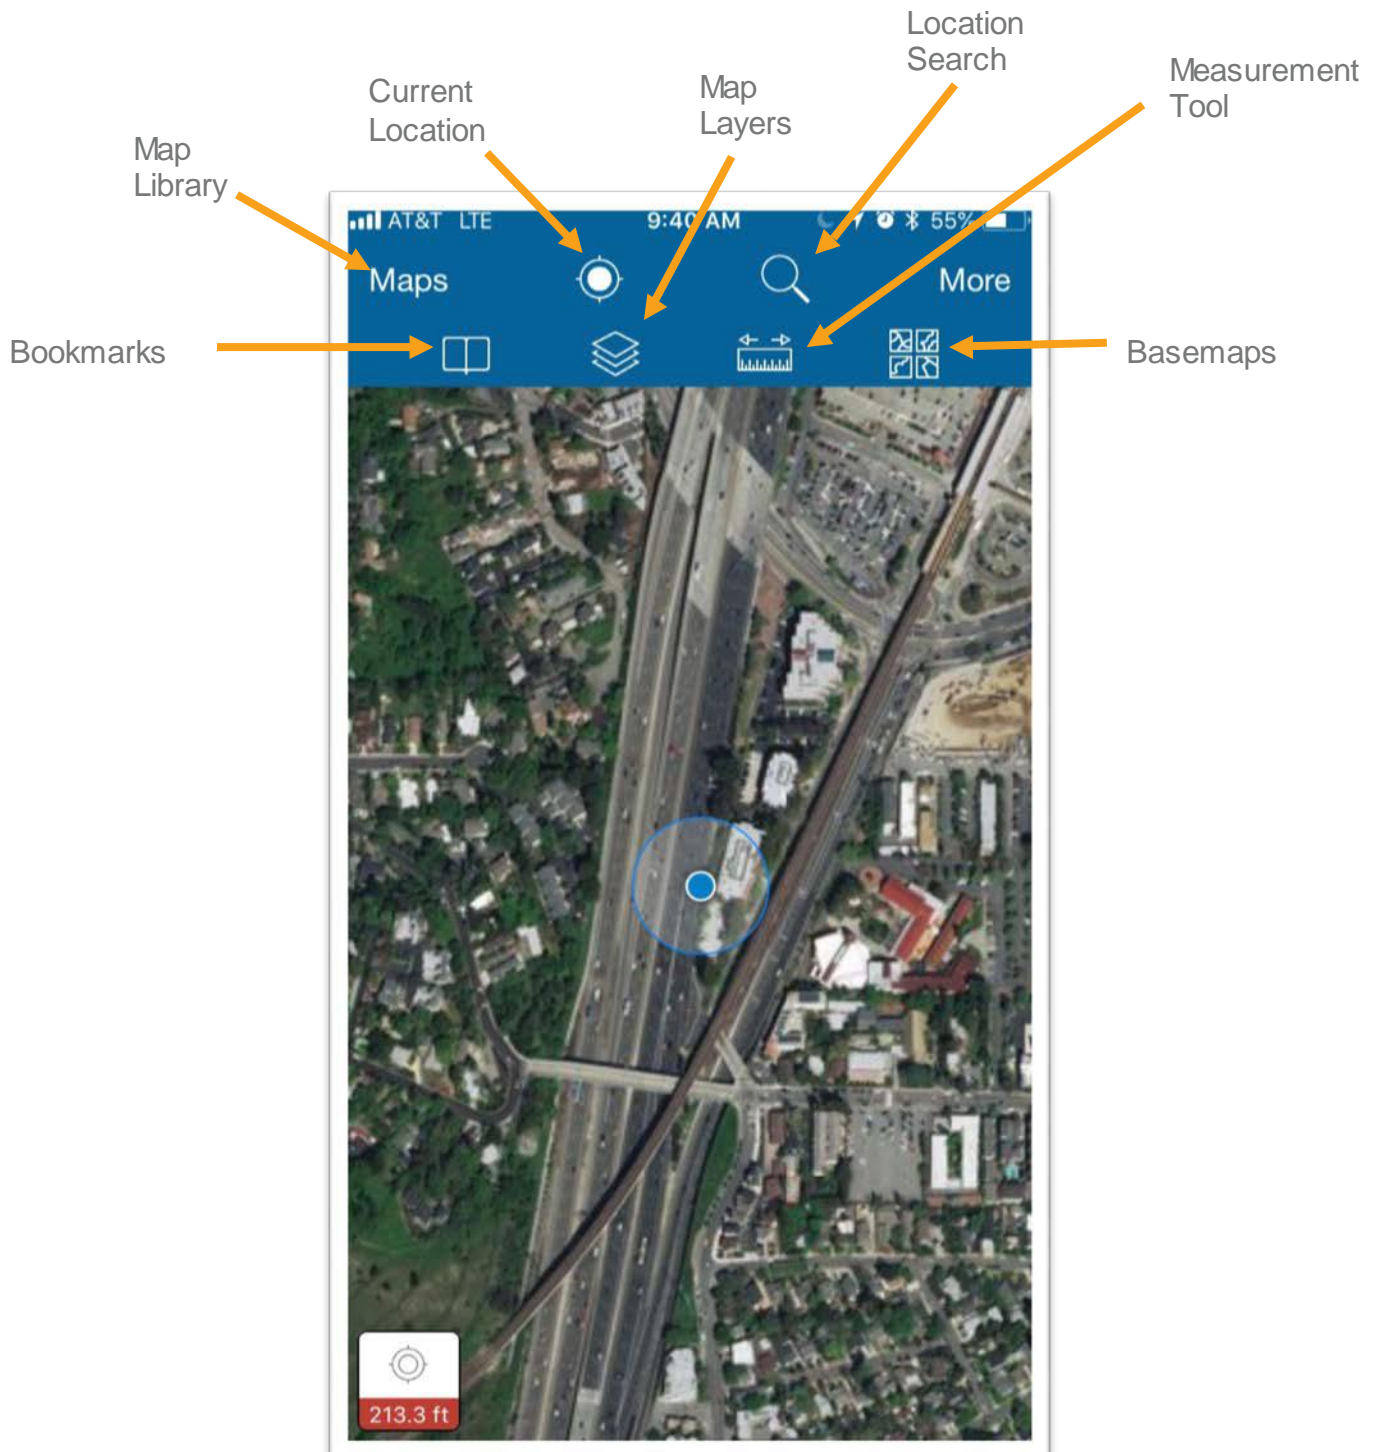

When the 'Current Location' icon is highlighted white, the GPS finder is on.

GPS Off

When the icon is not highlighted white, the GPS tracker is off.

Summary

This is an overview of the ArcGIS Online for mobile interface.

	Map Library	Navigates users back to the Map Library
	Current Location	Center map on your current location
	Bookmarks	Access your bookmarks
	Map Layers	Access Map Layers List
	Location Search	Search for addresses and locations
	Measuring	Access Measurement Toolkit
	Basemaps	Access to Basemap Library
	Add a feature	Create new point, polygon, or line
	Accuracy Integration	Horizontal and Vertical Accuracy

Summary

This is where all your maps are stored. You'll have the option to store the map on your device.

Store Maps on Device for 'offline

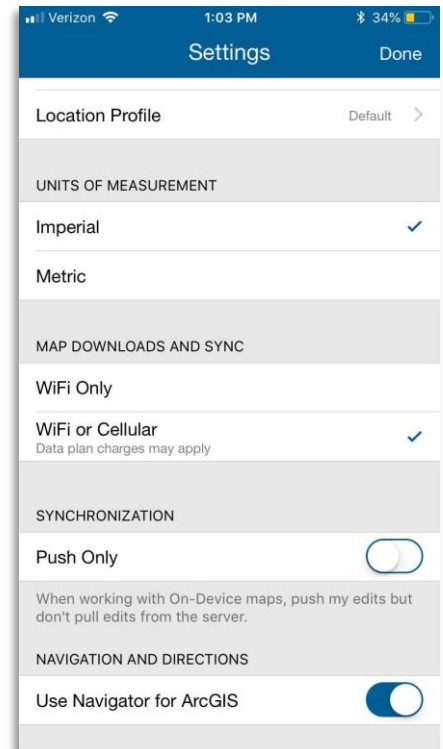

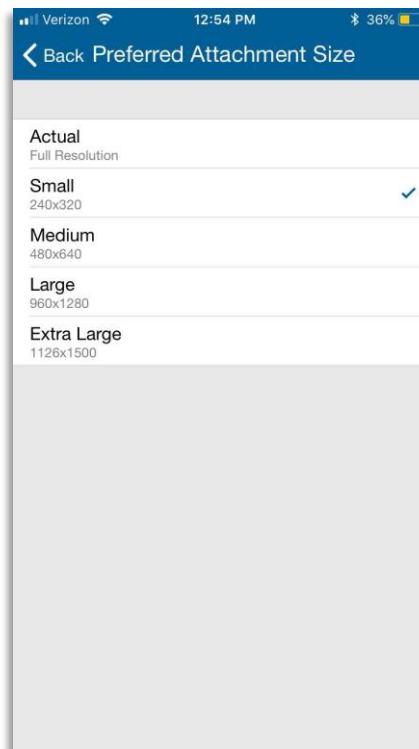

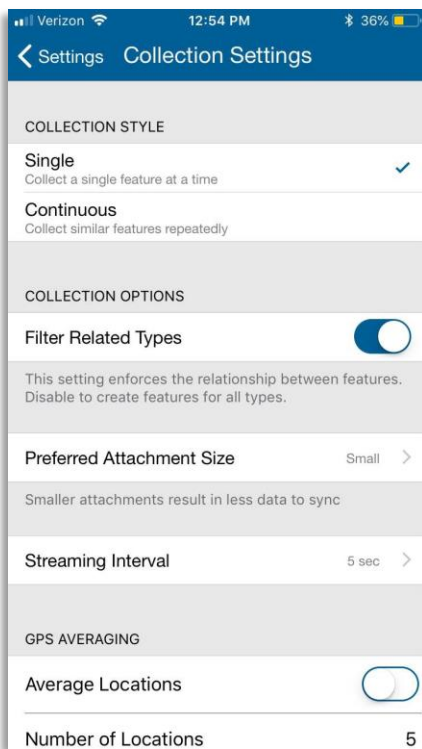

Map Details

View map and survey details

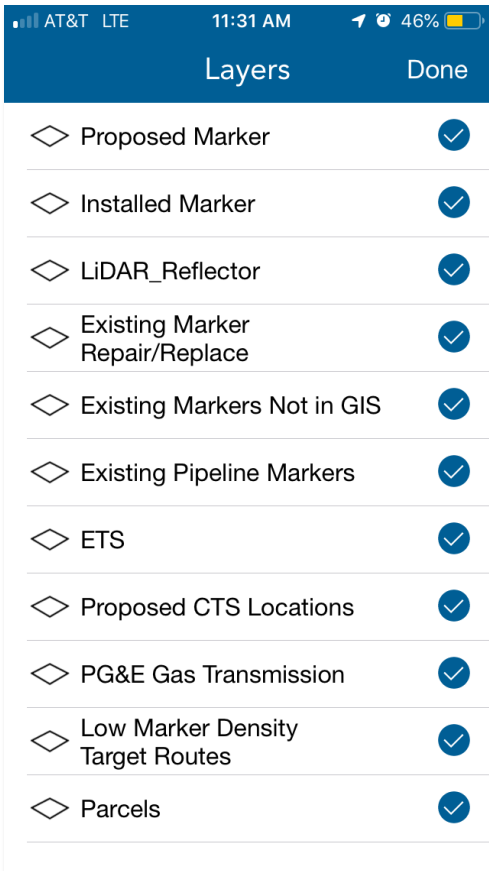

- Attachments should be saved as a small file type.
- Syncing of offline data should be available via wifi or cellular data.
- These can be configured in settings on the home screen.
- Open Settings and click on Collection Settings.

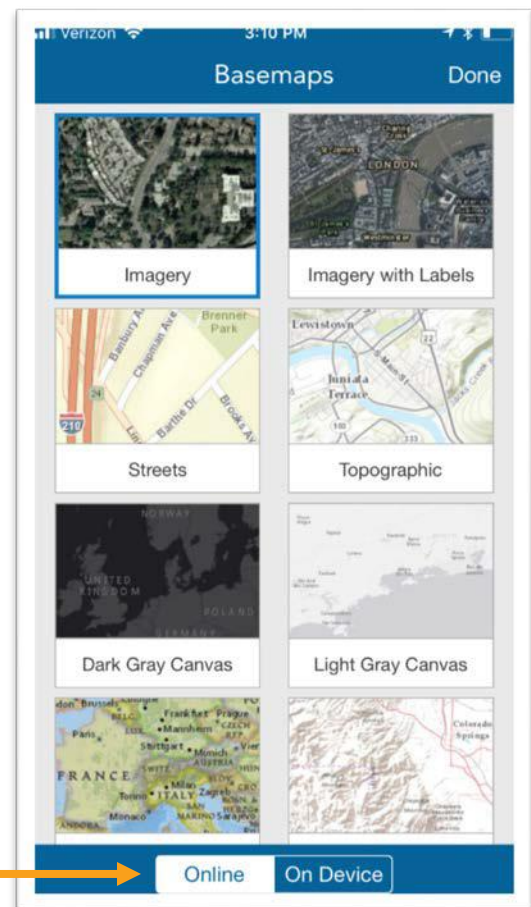

Open Preferred Attachment Size Choose small attachment size.

Choose Wifi or Cellular for Syncing

The available layers to view Proposed Marker, Installed Marker, LiDAR Reflector, Existing Marker Repair/Replace, Existing Markers Not in GIS, Existing Pipeline Markers, ETS, Proposed CTS Locations, PG&E Gas Transmission, Low Marker Density Target Routes, and Parcels. If the blue circle to the left of the layer option is checked and blue, the layer is turned-on and will appear on the map.

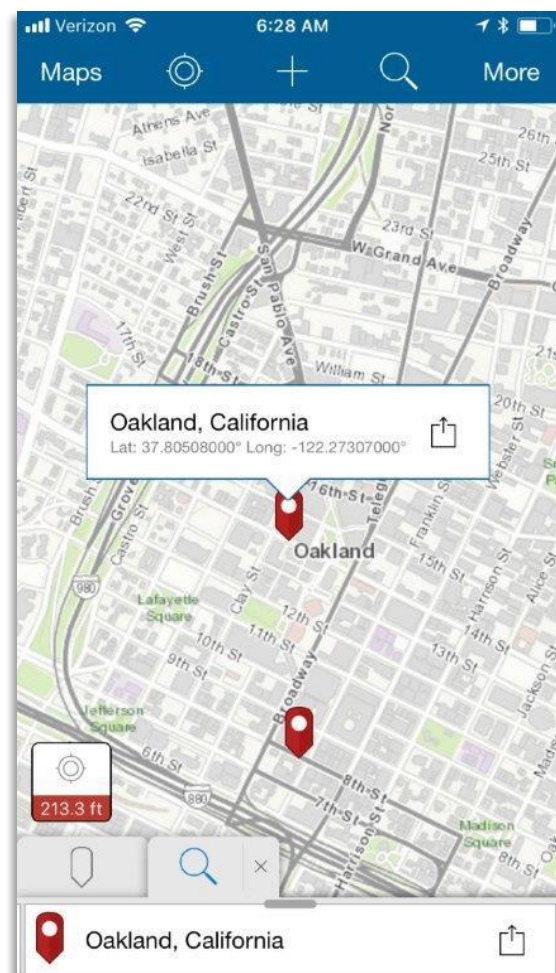

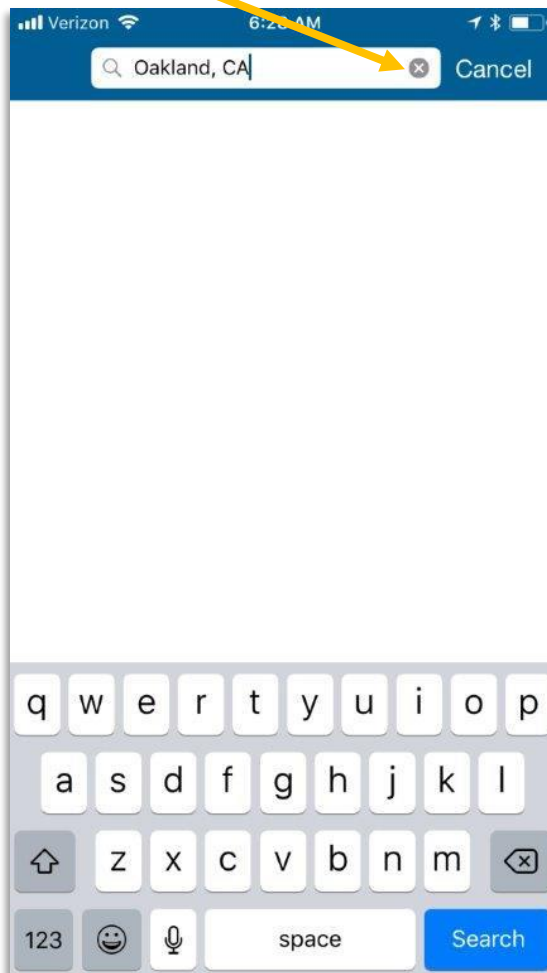

If connected to WIFI or mobile data (not working 'On Device') you can access any ESRI basemap at any time. While connected to WIFI or mobile data, you can store basemaps to be used when working 'On Device'. This is where you can change the display type of the map that appears on your screen.

Online/On Device Toggle

Summary

This is where you can search for places, addresses, or specific marker locations. Once you enter the place or address you would like to locate, the map will adjust accordingly. The search can be removed by selecting the 'x' mark within the search bar.

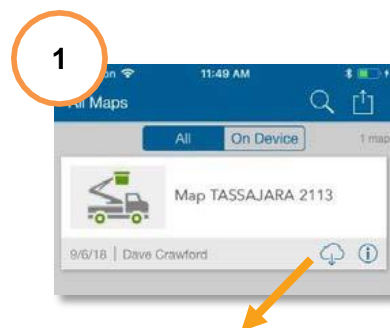

Upload and Sync Offline Maps

ArcGIS Collector

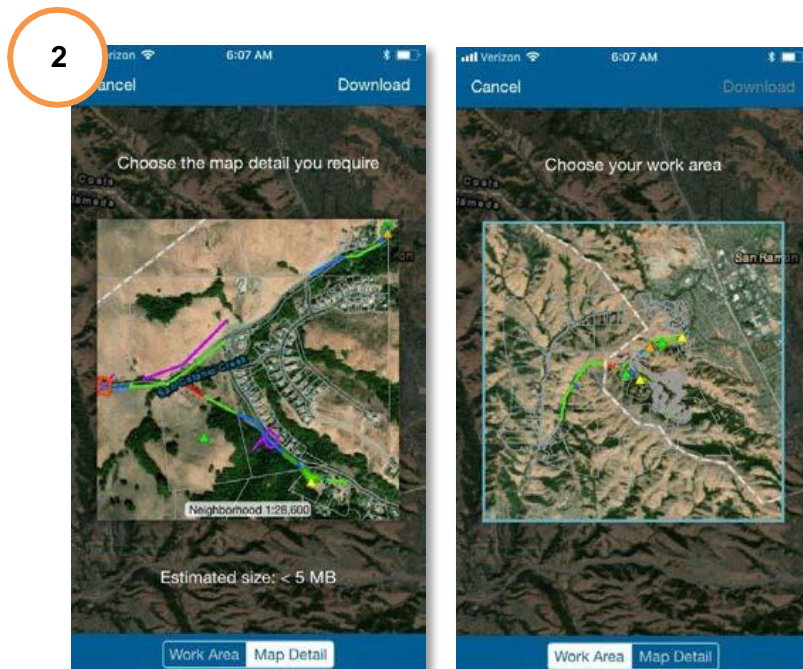

Summary

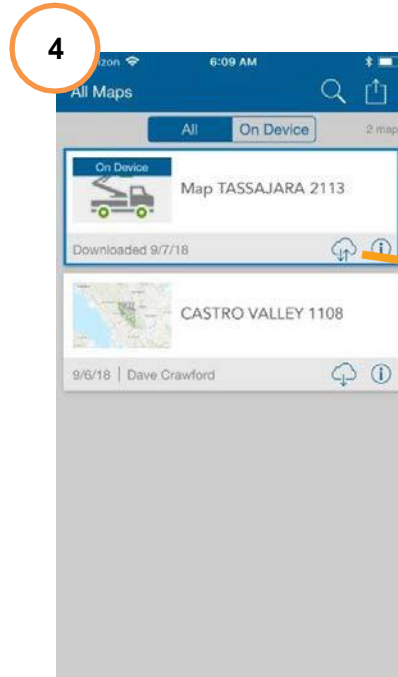

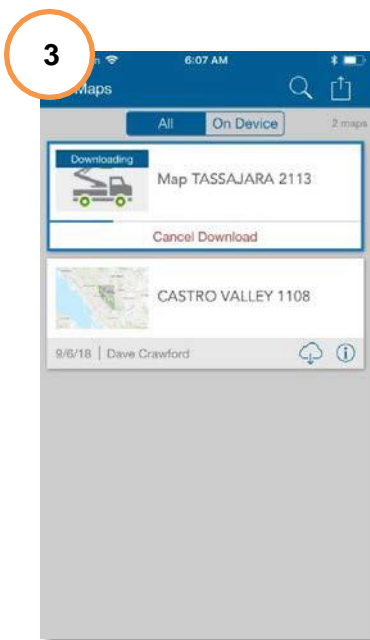

If you are working in a remote area with limited cellular service, you can download a map to work offline to work 'On Device'. If offline or working 'On Device', after you have re-established cellular service, you will need to go back to the 'Maps' menu under 'On Device' and click the up/down cloud icon with the red number (indicating the number of features that have not been uploaded to ArcGIS Online) and select the cloud to submit and sync these features to ArcGIS Online. This requires cellular data or WIFI connection.

Downloading a map for offline use

Click on the  icon to download the map.

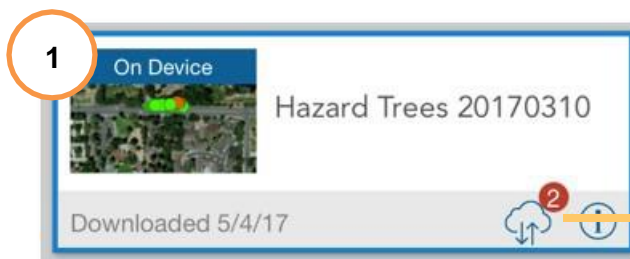

This icon means the map is now downloaded onto your device

Syncing your offline activity

If you are working offline or 'On Device', be sure to sync your data once you have re-established either cellular service or have a WiFi connection. Once you have finished syncing all your offline maps, you can delete the saved maps from your device.

Select Sync to Cloud icon to submit the 2 features added offline to ArcGIS Online.

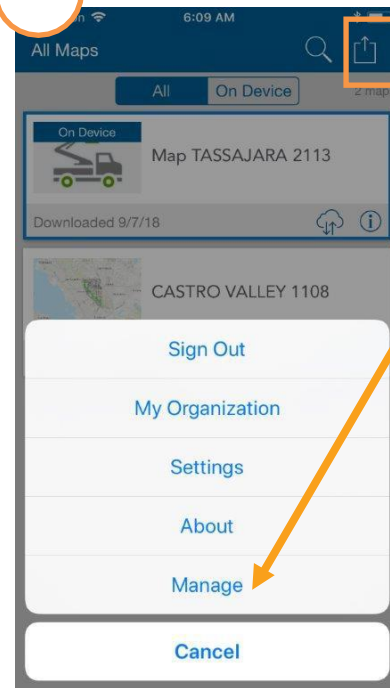

3

If you are working online, connected to ArcGIS Online with WiFi or cellular data, you do not need to sync because it is done every time you select submit.

4

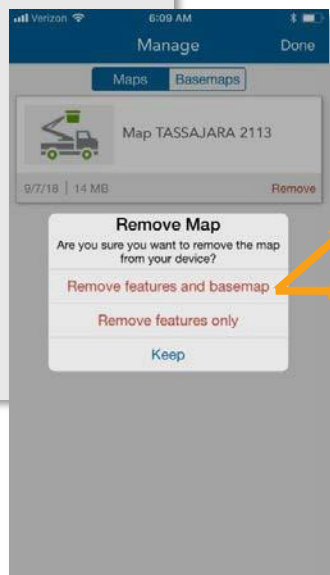

Click here and select "Manage" to delete the map off of your device once you have completed synced to ArcGIS

5

Select "Remove"

Select "Remove features and basemap" to delete the map from your device

Collecting Data

ArcGIS Collector

Summary

Below are the meanings of the symbols and colors that are seen throughout the map as you input the information for each layer.

Legend
Proposed Marker

Installed Marker

LiDAR_Reflector

Existing Marker Repair/Replace

Existing Markers Not in GIS

Existing Pipeline Markers

ETS

Proposed CTS Locations
MARKER_DENSITY_VALUE
 8.23 - 12.40
 4.06 - 8.22
 0.00 - 4.05
PG&E Gas Transmission

Low Marker Density Target Routes

Layer Description: Underground service alert that indicates there is a preliminary clearance to do work in the area.

Create New Feature for “New USA” layer

- Select ‘+’ tab
- Select “NEW USA” from list.
- Place point manually onto the map

 New USA Feature

Input/Change Attributes for “New USA”

- Place “New USA” point manually
- All fields are required except the Comments field
- For the correct Field Date, select TODAY

Field Personnel Full Name Required **Required Field Indication**

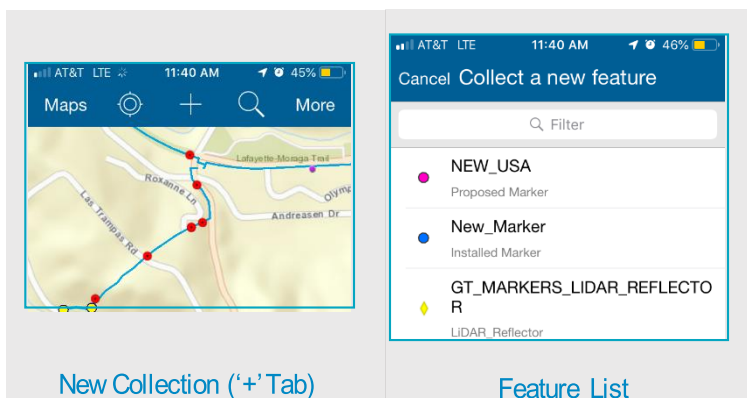

Submit

Submit

- Select SUBMIT located in right corner to save changes

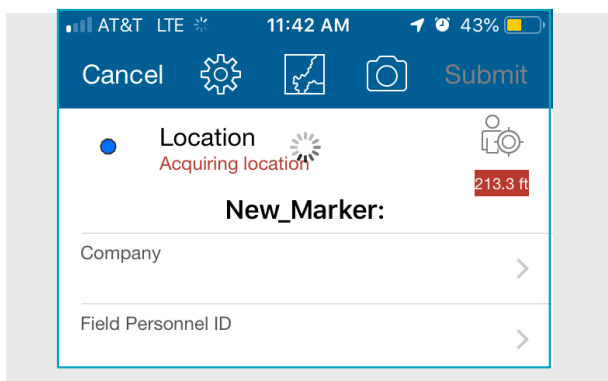

Layer Descriptions

New Marker: Points where additional 'Line of Sight' or 'PI' pipeline markers are installed. These are installed at contractor's discretion.

Add "New Marker"

- Select '+' to access layer list
- Select "New Marker"
- Input attributes in the input boxes

Input/Change Attributes

- Input the necessary attributes

Inspection Complete? >

USA Ticket Number >

- Pipeline Disc Indicator
- Pavement Decal
- Tri-View Marker
- Composite Marker
- Plastic Post Marker

Select MarkerType

- Input the necessary attributes

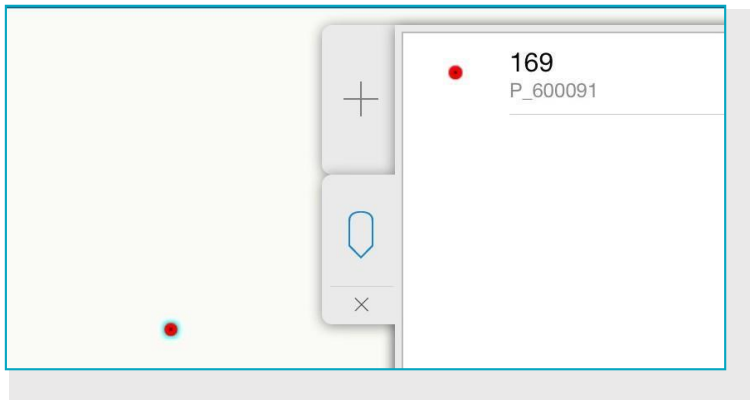

Submit

Location: 37.75828441° Long: -121.95525799°

Submit

- Select SUBMIT to save changes

Layer Description: All existing markers that are identified in the field are added to this layer. This indicates to office staff and others that these features have been checked in the field. Sub-meter accuracy if possible.

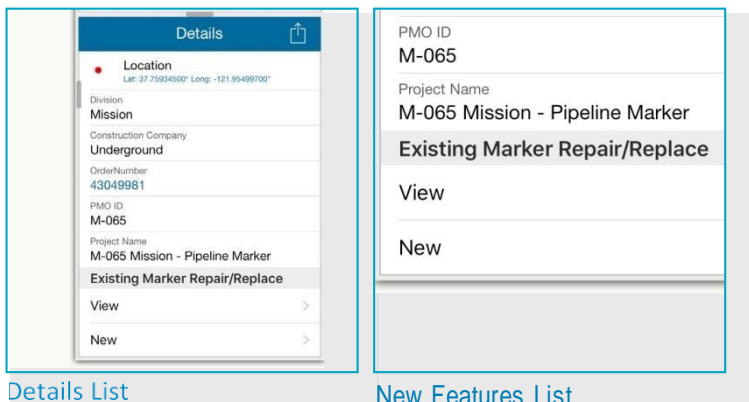

Select “Existing Pipeline Marker” located on the map

- Existing Repair/Replace Markers are related to Existing Pipeline Markers, you need to select the feature that you are going to repair and replace.
- A blue box will appear once it is selected.

Existing Pipeline Marker

Create New Related Feature to “Existing Marker Repair/Replace” layer

Details List

New Features List

- Scroll down to the bottom of the Details list
- Select NEW under “Existing Marker Repair/ Replace”
- The attributes list will pop up
- Collector will automatically determine your location via GPS receiver.

Existing Marker Repair/Replace Marker

A screenshot of a mobile application interface. On the left is a map with a yellow location pin. To the right of the map is a form titled 'Location' with the coordinates 'Lat: 37.75886241° Long: -121.95539672°'. Below this is a section titled 'Existing Marker Repair/Replace:' containing three input fields: 'PIPE GIS ID' with the value 'P_600091', 'Company', and 'Field Personnel ID'. Each input field has a right-pointing chevron icon.

Input/Change Attributes for feature being repaired and replaced

- Required fields are indicated below the attribute names

A screenshot of the same mobile application interface, but with a blue 'Submit' button at the top. The form content is identical to the previous screenshot, showing the 'Location' details and the 'Existing Marker Repair/Replace:' section with the 'PIPE GIS ID' field containing 'P_600091'.

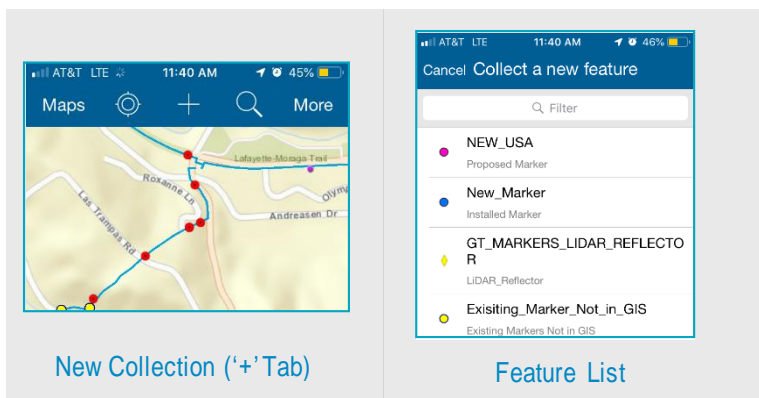

Submit

- Select SUBMIT to save changes

Note: This is used in the rare situation where you find a Pipeline Marker in the field that has no existing GIS Feature. When using this option, you are responsible for adding a new feature to PG&E’s master dataset of Pipeline Markers

Existing Pipeline Marker

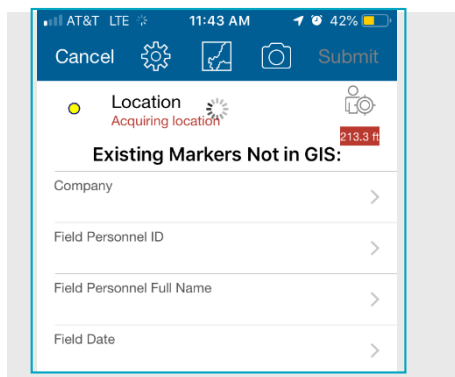

Layer Description: This layer is for markers found in the field and are not currently identified in the buffer. Sub-meter accuracy if possible.

Create “Existing Marker Not in GIS” feature

- Select ‘+’ tab to access layer list
- Select “Existing Marker Not in GIS” from layer list

Existing Marker Not in GIS

Input/Change Attributes

- Required fields are indicated below the attribute names
- The GPS will automatically find your location and set the marker on the map

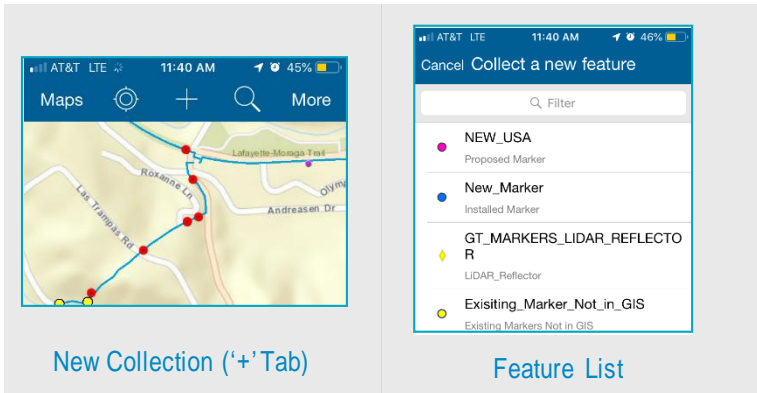

Submit

- Select SUBMIT to save changes

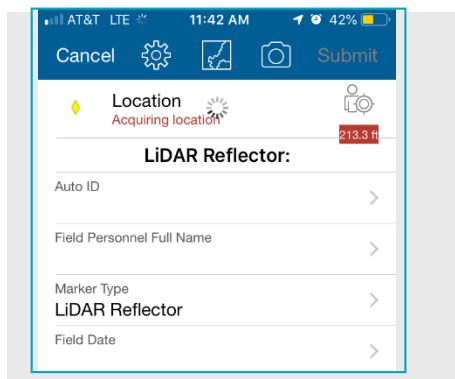

Layer Description: This layer is for caps that are going to be added to markers. These are used to visualize the markers from the air.

Create “LiDAR Reflector” feature

- Select ‘+’ tab to access layer list
- Select “LiDAR Reflector” from layer list

Input/Change Attributes

- Required fields are indicated below the attribute names
- The GPS will automatically find your location and set the marker on the map

Submit

- Select SUBMIT to save changes
